Introduction

By March 2006, 34 of 53 occupational groups tracked by the Alberta government showed an unemployment rate of three per cent or less, indicating skill and labour shortages. This document presents a series of economic indicators to identify labour and skill shortages or surpluses in industry sectors.

Indicators such as the unemployment rate, vacancy rate, hiring difficulty rate and demand-supply ratio[1] are used to determine the presence of shortages or surpluses now and in the future. This tool should not be used to make decisions. Instead, the intent of this dashboard is to spark discussion and give a snapshot of where the occupational cluster is likely to be within the next 10-year period. Additional provincial labour market information, including regional information, can be obtained at www.hrie.gov.ab.ca/lmi to assist with decision making.

What is a shortage?

Shortages were determined by looking at the unemployment, vacancy, and hiring difficulty rates, as well as the demand-supply ratio for a number of occupational clusters within sectors. Occupations are sorted by industry sector as outlined in Appendix A.

This booklet uses a traffic light system to help define shortages, based on the following:

Unemployment: If the unemployment rate of an occupation is less than three per cent, there is a shortage.

Vacant jobs: If the vacancy rate of an occupation is more than two per cent, there is a shortage.

Hiring difficulty: If the hiring difficulty rate of an occupation is more than 25 per cent, there is a shortage.

Demand and supply of workers: A demand-supply ratio of greater than one indicates a supply shortage while a ratio of less than one indicates a supply surplus.

Occupational clusters are coded red, yellow or green based on the following:[2]

Red – All indicators show shortage OR the vacancy rate is over five per cent and the reported hiring difficulty over 40 per cent.

Yellow – One or more indicators show shortage.

Green – All indictors show a surplus.

[1] See Appendix B for more information about the unemployment rate, vacancy rate, hiring difficulty rate and/or demand-supply ratio.
[2] See Appendix C for more detailed information on the colour coding for each occupation.

Forestry and Forestry Products

The forestry and forestry products industry consists of the primary forestry sector, which includes pulp and oriented strand board, and the secondary sector, which includes paper and value-added wood processing.[1]

Industry Challenges and Issues

The forestry and forestry products industry is a high tech, capital-intensive industry that competes globally. The industry will continue to rely on new technology, such as information systems, harvesting technology, geographic information systems and computer modeling, to reduce environmental impact.

Alberta's primary forestry and logging industry is not expected to grow significantly because all available timber in the province is allocated. If the trend towards consolidation in the industry continues, there may be a decline in employment. Technological advancements are also expected to reduce employment levels in this sector.

The sector is experiencing strong competition for workers from other sectors, including the energy sector, where wages are higher and work is plentiful. An additional challenge is the shortage of truck drivers to transport both logs and processed materials.

Occupational Cluster	2003[2]	2005	2015
Administrative and Regulatory Occupations	Concern	Concern	Shortage
Administrative Services Managers	Concern	Concern	Surplus

[1] This information is based on Government of Canada statistics and projections for the North American Industry Classification System (NAICS) major group 23.

[2] The rationale for using 2003, 2005, and 2015 as years to show trend is indicated in Appendix D.
